**DETAILED ACTION*****Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 19-31 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-18 of U.S. Patent No. 6,466,901 and claims 1-45 of U.S. Patent No. 6,654,717. Although the conflicting claims are not identical, they are not patentably distinct from each other because:

Independent claim 19 of this application (10/612,936) recites a system for indexing textual content in a plurality of languages for searching purposes comprising:

“a tokenizer which separates...tokens”

"a stemmer which reduces the word tokens to grammatical stems...without regard to whether the remaining stem is a recognized word in a combination of the plurality of languages and

"an index which stores the stems in an index"

Independent 1 of Patent 6,466,901 recites a method for indexing textual content in any of a plurality of languages...the steps of"

Separating...tokens

Reducing the word tokens...without regard to whether the remaining stem is a recognized word in any combination of the plurality of languages ; and

Storing.

Indeed, the claimed limitations of the Patent 6,466,901 encompass the claimed limitations of the present application (10/612,936).

Independent claim 1 of U.S. Patent No. 6,654,717 encompass the claimed limitation of claim 26 of the present application (10/612,936)
